

## II. Amendments to the Specification

Please amend the last paragraph on page 26 which carries over to the top of page 27 as follows:

The base member 11 must be pre-processed on the surface thereof by coating with or being made of such material that can fix the substances for detection. A cross section of the base member 11 is substantially circular, as a circle or ellipse. Plural angular projections 11a are mounted on the outer periphery along the circumference at predetermined intervals. ~~projections 11a are mounted on the outer periphery along the circumference at predetermined intervals.~~

Please amend the last paragraph on page 27 which carries over to the top of page 28 as follows:

~~specific numerical value examples.~~ The diameter of the core 13 of the reel 12 is for example, 5 mm and the diameter of the base member 11 is for example, 0.05 mm, and the length of the base member 11 is for example, 2000 mm. For example, 1000 types of substances for detection are fixed in a width of for example 1 mm, and at intervals of for example, 0.6 mm. For example, 30 rows of base member 11 are wound around the core 13, at intervals of for example, 0.05 mm. In this case, the necessary width of the core 13 is, about  $(0.05+0.05) \times 30 = 3$  mm.
